Operations and profit

In 2021 the COVID-19 restrictions impacted our operations negatively during the first half year. The travel restrictions were lifted at the end of Q2 2021 and the impact from the restrictions were limited in the second half of 2021 and onwards.

At the end of 2021 AKVA group experienced challenging profit margins due to high cost inflations and global supply chain restrictions. This has been further intensified in 2022 due to the war between Ukraine and Russia. Examples include increased freight rates, high energy prices and increased price level on raw materials and key components in general. The estimated P&L impact from the high cost inflations in the first half year was MNOK 57. Furthermore, the global instability has a negative impact on the net working capital in 2022 and especially for inventory levels. The increased inventory levels are partly related to higher price levels and partly to secure supplies for our production facilities and products. The situation has normalized somewhat in Q3 2022 but is still considered to be uncertain going forward.

The Company obtained a waiver from DNB in respect of the leverage ratio (NIBD/EBITDA covenant). The waiver is effective from 30 September 2022 to and including 30 September 2023 (waiver period). The potential liability of this is estimated at MNOK 7, due in 2023, and the amount is presented within the non-interest-bearing liabilities in the balance sheet.

The 20 largest shareholders are presented in note 6 in this report.

Market and future outlook

The order backlog remains sound and was MNOK 1,579 (1,740) at the end of Q3 and forms a good foundation to execute the organic growth strategy.

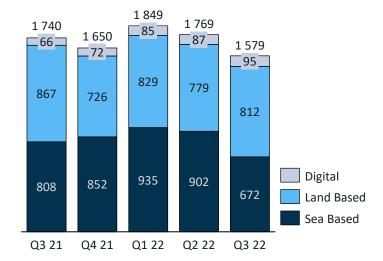

The impact from the global instability and uncertainty related to supply chain restrictions and cost inflations were reduced in Q3 2022 but may continue to impact the profitability on short term.

The implications from the introduction of new resource tax are uncertain. Most likely this will have a negative impact on the order intake level on short and medium term.

Based on the underlying demand for salmon the Group still believes in a strong market growth long term. To meet the future demand a significant part of the production will come from land-based facilities or other unconventional production methods.
